FOREWORD

The agriculture sector is considered as key in enhancing the economic growth of a country along with mitigating the concerns of food security. This sector is the main source of rural poverty alleviation and employment generation. The agricultural sector, contributing 23.54 percent in GDP and 37 percent in employment generation, ensures food security and provides raw material to the industrial sector. It is the main sector for social formation in our country.

Statistical data and information are crucial in attaining the national development goals and socio-economic development. Adequate, reliable, and accurate statistical data is required in economic planning, and analyzing the data facilitates in acquiring results of the present economic status and also in explicating the future outcomes. It provides the basis for the factors that shape development planning and decisions at the regional and district levels.

The publication “Crops Area & Production (Districts Wise)” comprises of latest district-wise data of Major and Minor crops including Food and Cash crops, Pulses and Oilseeds, Fruits, Vegetables, and Condiments statistics for the years 2023-24 and 2024-25. This publication will prove to be immensely helpful in facilitating the research work and will help government functionaries, academicians, and all those who are interested in the issues relating to the development of the Agriculture Sector.

I wish to appreciate the efforts made by the team who are directly or indirectly involved in the compilation of this publication, including the federal and provincial organizations, which positively assisted the Economic Wing to compile the publications.

Suggestions and comments for further improvement of this publication would highly be appreciated.

(Musaddiq Ahmed Khan)
Secretary

Islamabad, March 24, 2026

EXECUTIVE SUMMARY

Pakistan, a predominantly agrarian economy, relies significantly on its agriculture sector. With a rich agricultural history dating back centuries, agriculture remains a cornerstone of Pakistan's economy, contributing 23.54 percent to GDP and providing employment to about 37 percent of the labour force. During fiscal year 2024-25, the agriculture sector recorded a growth of 0.56 percent, mainly supported by growth in livestock, forestry, and fisheries.

During FY 2024–25, important crops' growth declined to -13.49 percent from 17.09 percent last year. However, better performance in other crops, which recorded a growth of 4.78 percent, partially offset the decline in important crops. This highlights the potential for diversification within the crop sector.

The sector mainly comprises crops, livestock, and fisheries, with wheat, cotton, rice, maize, and sugarcane being the major crops. Agriculture is highly dependent on the country's irrigation system, as most of the land is arid or semi-arid. In recent years, the sector has faced several challenges such as climate variability, high input costs, water scarcity, and declining productivity, which have negatively affected crop performance and food security. Despite these challenges, agriculture remains a vital sector for Pakistan's economic development, poverty reduction, and export earnings. With appropriate policies, technological adoption, and investment in climate-resilient agriculture, Pakistan has the potential to enhance productivity and strengthen its position in regional food markets.

Agriculture supports industry by providing raw materials, generates foreign exchange through exports, and contributes to poverty reduction at the national level. The development of agriculture depends on sound policies and planning based on empirical data. The Ministry of National Food Security and Research has prepared its publication "*Crops Area & Production (District Wise) 2024-25*", which provides district-level statistics for 51 crops, including key indicators such as area and production. This publication facilitates policymakers, researchers, academia, and students working in the agriculture sector.

The production of major crops during 2024–25 showed a mixed trend, with overall declines in most major crops compared to the previous year due to adverse weather conditions and reduced cultivated area. The details of the major crops are explained below.

WHEAT:

Wheat is the major Rabi crop of the country and a key component of national food security. Wheat production during 2024–25 was estimated at 28.5 million tonnes, compared with 31.8 million tonnes last year, showing a decline of 8.9 percent. The reduction in production was mainly attributed to reduced cultivated area, higher temperatures during the sowing season, and insufficient rainfall.

RICE:

Rice is an important food as well as cash crop. It is the second main staple food crop after wheat and a major export commodity of Pakistan. The production of rice during 2024–25 was estimated at 9.72 million tonnes, showing a decline of about 1.4 percent compared to last year's production of 9.86 million tonnes. The slight reduction in production was mainly due to lower yield despite an increase in cultivated area, reflecting weather-related challenges.

MAIZE:

Maize is the third most important cereal crop of Pakistan after wheat and rice. It is cultivated as a multipurpose crop for food, feed, and fodder. During 2024–25, maize production declined to 9.0 million tonnes, compared to 9.74 million tonnes in the previous year, registering a decline of 15.4 percent. The decrease was mainly due to reduced sowing area and unfavorable climatic conditions.

SUGARCANE:

Sugarcane is a high-value cash crop and plays a vital role in the country's sugar industry. It is mainly cultivated in Punjab, Sindh, and Khyber Pakhtunkhwa. During 2024–25, sugarcane production was recorded at 84.24 million tonnes, showing a decline of 3.9 percent compared with 87.64 million tonnes last year. The decrease was mainly due to reduced cultivated area and climatic variations.

COTTON:

Cotton is often referred to as the “white gold” of Pakistan due to its importance for the textile industry, which is the backbone of the country's exports. During 2024–25, cotton production declined sharply to 7.08 million bales, compared to 10.22 million bales in the previous year, registering a decline of about 30.7 percent. The reduction in production was mainly attributed to climate stress, pest attacks, and reduced cultivated areas.

OILSEED:

Oilseeds such as soybean, rapeseed, mustard, sesame, groundnut, sunflower, and canola play an important role in global agriculture and human nutrition. Edible oil is Pakistan's largest food import commodity, ranking among the top items in the country's import bill. Pakistan still relies on imports to meet a major share of its edible oil requirements. Despite this dependence, domestic production of some oilseed crops has improved. For instance, sesame production increased significantly to about 0.44 million tonnes, reflecting a 44.7 percent increase, mainly due to expansion in cultivated areas and favorable market prices.

PULSES:

Pulses are cultivated on around 5 percent of the total cropped area in Pakistan. Major pulses grown in the country include gram, mung, mash, and masoor. Despite their importance as a major source of plant-based protein, domestic production of pulses remains insufficient to meet national demand, and the deficit is met through imports. Major import partners include Australia, Canada, Russia, Argentina.
